The Honorable Gregory M. Sleet
United States District Court
844 North King Street, Lock Box 31
Wilmington, DE 19801

*RE: Honeywell v. Hamilton Sundstrand,
C.A. No. 99-309-GMS*

Dear Judge Sleet:

Defendant Hamilton Sundstrand ("HSC") and plaintiff Honeywell submit this joint agenda outlining a discovery dispute that will be one of the subjects of the conference call scheduled for January 26, 2006 beginning at 10:00 a.m.

HSC seeks certain post-1985 documents relating to the 331-350 APU that Honeywell developed in the 1980s. Although the Court set 1985 as the general cut-off date for relevant document discovery, the Court and the parties recognized that there may be instances where discovery concerning technology created after 1985 may be appropriate. Based on recent deposition testimony, HSC believes that the Honeywell 331-350 surge control system experienced the inverted-V/double solution problem and solved it using inlet guide vane position, just as the accused APS 3200 does. HSC believes the documents it seeks go to the foreseeability issue on remand.

HSC therefore requests an order compelling Honeywell to produce certain documents relating to the development of the surge control system for the 331-350 APU. Specifically, HSC seeks (1) the 331-350 "design notebook" about which Honeywell's 30(b)(6) deponent, Mr. Clark, testified; (2) the documents showing the surge control logic of the 331-350 APU referenced by Mr. Clark; (3) documents sufficient to show the conception date of that approach; (4) the procurement specification (and all drafts) for the control unit for the 331-350 referenced by Mr. Clark; and (5) the "memos" referred to by Mr. Clark.

THE BAYARD FIRM

Page Two

Honeywell believes the post-1985 documents HSC seeks regarding the surge control system for the Honeywell 331-350 APU are not relevant to the narrow issues before this Court on remand. Honeywell believes the discovery to date establishes that the 331-350 surge control system was developed in the late 1980s, years after the relevant amendment dates in 1982-83. In addition, there has already been significant discovery relating to the 331-350 surge control system, including deposition testimony and the production of numerous documents, so further discovery would be burdensome and duplicative.

Respectfully submitted,

/s/ Richard D. Kirk (rk0922)
